Dear Rob

What a car!

Even after Chris's enthusiastic report from your last visit I was still expecting a sort of up-market kit car. What I did not expect was something that could literally have come out of Mulliner Park Ward!

The quality of design and build and the attentive detailing all around the car are more than impressive - they are amazing!

Although I am sorry that I did not drive the car, Chris Snowdon's comments are far more relevant. He is our main professional driver and in addition to having driven countless laps in out-and-out sports cars, we have worked extensively for both Jaguar and very recently Rolls Royce. Indeed he has driven thousands of miles in the current Bentley Range.

His comments are as follows.

"The car is very impressive. It handles like the current Bentley Brooklands which is essentially a Bentley Turbo R without the turbo charge with sports suspension and dampers, and that is quite a compliment.

It is beautifully neutral on the circuit, handling Goodwood's ultra high-speed corners feeling nicely balanced with only a hint of reassuring understeer when you really push hard.

I could always tell when the limit was close because the car eventually begins a curious rocking movement which I remember from my previous drive last year. Speaking of last year the improvements we discussed at that time have really paid dividends.

Dynamically the car is very impressive indeed for the enthusiastic driver."

Both of us felt honoured to have been involved in the car's story - it is a credit to you.

Kind regards

Chris Taylor
Director
